Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-11, drawn to a method of separating.

Group II, claim(s) 12-14, drawn to a packing material.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Claims 12-14 are either obvious or anticipated by JP 7-318551. Accordingly, the special technical feature linking the inventions does not provide a contribution over the prior art, and no single inventive concept exists. Therefore, restriction is appropriate.

In addition to the restriction requirement, the following two election of species are required:

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

Election I

The species are as follows:

Art Unit: 1723

Each of the four compounds listed in claims 6 and 14 are considered to be distinct species.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Election II

The species are as follows:

Each physical stimulus, such as temperature, is considered to be a distinct species.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Art Unit: 1723

The claims are deemed to correspond to the species listed above in the following manner: For election I, each of the compounds of claims 6 and 14 are directed to different species. For election II, claim 2-6 are directed to different species.

The following claim(s) are generic: claim 1 is generic.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: The generic claim 1 is unpatentable. Each species is patentably distinct from each other species.

The PCT/ISA/ 210 lists eight references, which would appear to be essential for a proper examination of the application. However, copies of them are not in the instant application. It would be appreciated if applicant would submit copies of these references with his response to this office action. Such a timely submission would enhance the quality of examination. In addition, if applicant submitted the copies of these references with his response to this office action, no fee would be required.

Any inquiry concerning this communication should be directed to E. Therkorn at telephone number (703) 308-0362.
